Summary

Computer Science student with hands-on experience building full-stack web applications using Java, Spring Boot, React.js, and MySQL. Strong understanding of RESTful APIs, database management, and software development principles, with a focus on developing scalable applications and writing clean, efficient code. .

Technical Skills

Languages & DataBase: Java, JavaScript, Python , C++, MySql, PostgreSQL,

Frameworks: Spring boot , Spring MVC, Spring Data JPA, Hibarnet

Others: HTML, CSS, Chatbot Development, RESTful API,

Projects

Detection of Triple-Negative Breast Cancer (TNBC) using CNN (FYP)

- Developing a convolutional neural network model to identify triple-negative breast cancer patterns from histopathology images.
- Curating and preprocessing medical imaging datasets, applying augmentation techniques to improve generalization and reduce overfitting.
- Evaluating model performance using precision, recall, and ROC-AUC, ensuring clinically meaningful and reliable predictions.

Library Management System

- Designed and implemented a library management system to efficiently handle book records, member registrations, and issue tracking.
- Developed relational database schemas ensuring data consistency, optimized queries, and smooth handling of concurrent user operations.
- Built user-friendly interfaces for librarians and members to search, reserve, and manage book transactions seamlessly.

BikeZone – Online Bike Store System

- Designed and developed an online bike store system enabling users to browse, compare, and purchase bikes seamlessly.
- Implemented product catalog management with filtering, sorting, and detailed specifications to enhance user decision making experience.
- Integrated secure checkout workflows and order tracking features to ensure reliable transactions and improved customer satisfaction.

AI Fashion Chatbot System

- Developed an AI-powered fashion chatbot system to provide personalized outfit recommendations based on user preferences and trends.
- Implemented natural language processing techniques to understand user queries and deliver context-aware, relevant fashion suggestions.
- Integrated product catalogs and style datasets to enable real-time responses and improve overall user engagement experience.

ATM Authentication System

- Designed and implemented an ATM authentication system to securely verify users through PIN validation and access controls.
- Applied encryption techniques to protect sensitive user credentials and ensure confidentiality during authentication processes.
- Developed backend logic to handle multiple authentication attempts, minimizing risks of unauthorized access and fraud incidents.

Education

Salim Habib University, Karachi

Bachelor of Science in Computer Science

Karachi, Pakistan
